

Portfolio Website Presentation

By Steffy Johnson

Introduction

- **Purpose of this website -**

The purpose of this website is to showcase my skills as an aspiring web developer and an IT professional that portrays my professional knowledge, my experience and my projects along with my interests.

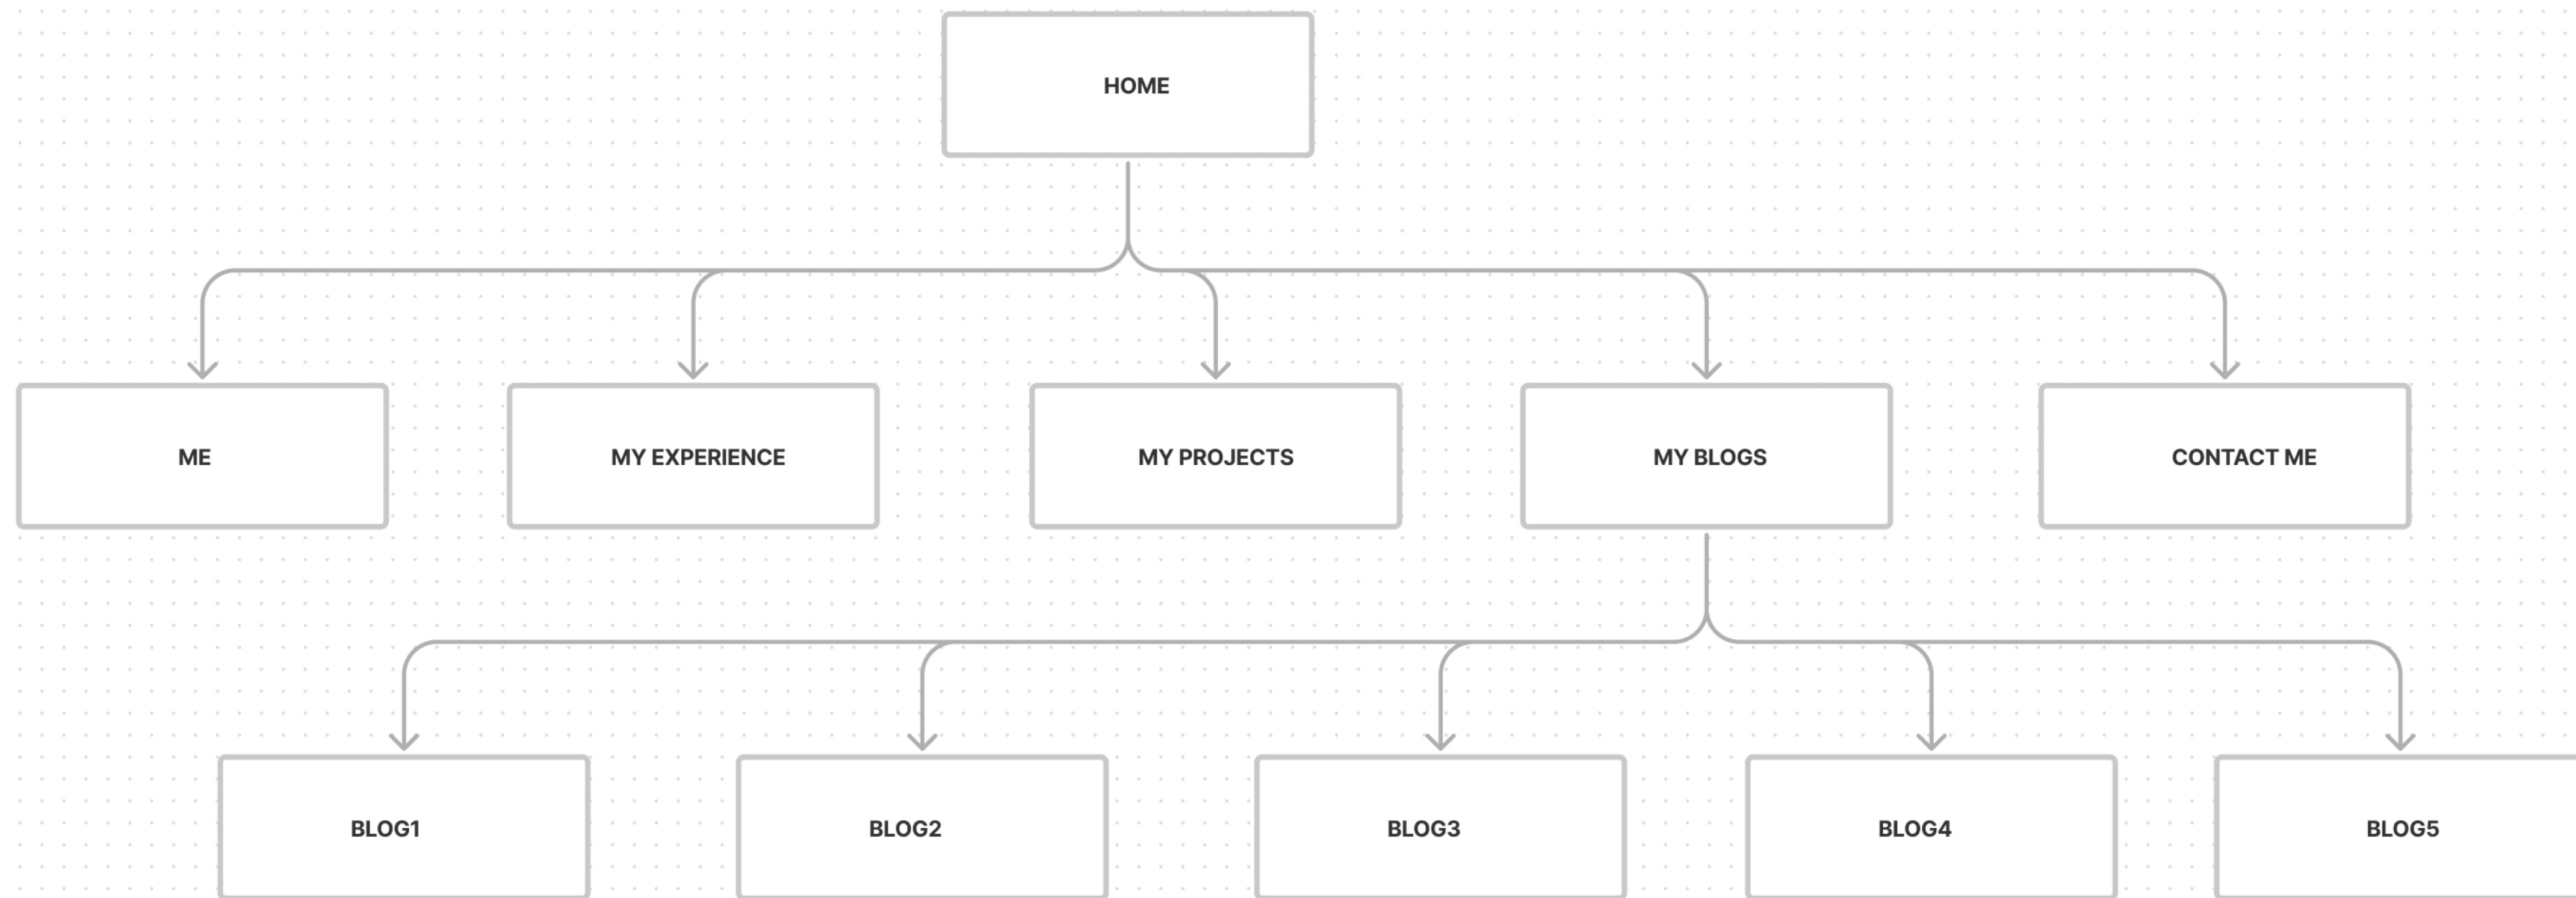

- **Target Audience -**

The target audience for my portfolio website is for prospective employers having an expectation on my technical knowledge relating to IT, software development or coding and development stacks. This site is also responsive for mobile, tablet and desktop to allow for a multi use audience.

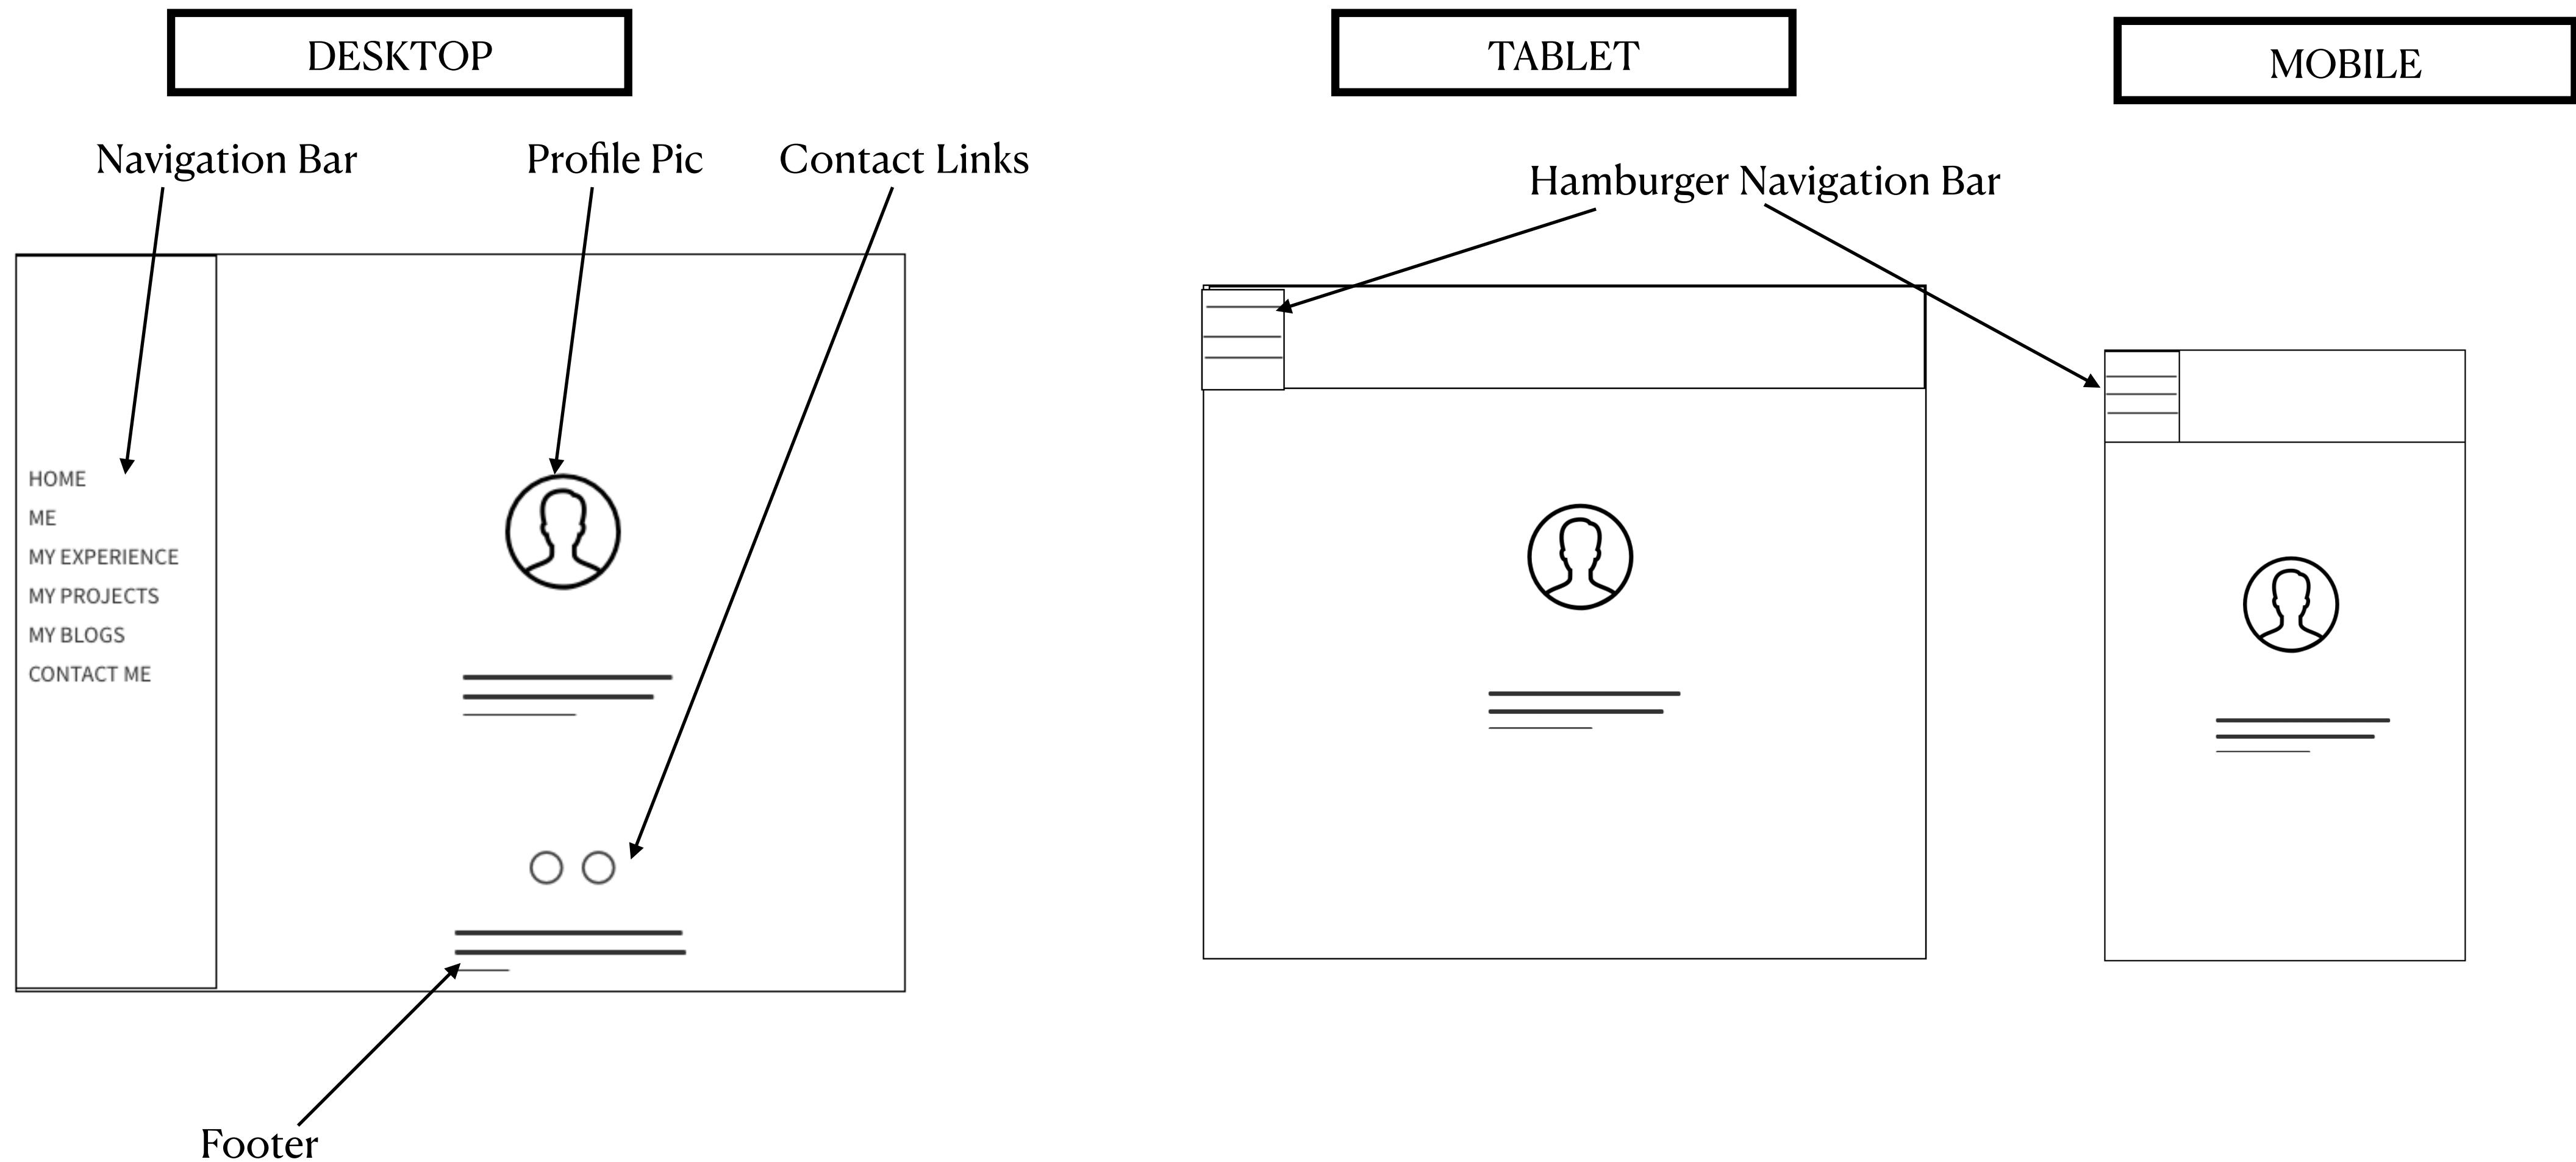

- **Tech Stack -**

This portfolio is designed using HTML, CSS and Java script. I have used semantic HTML elements and attributes to add meaning & accessibility. I have included graphical content with animations that might be pleasing to the eyes.
